MINING, BUSINESS AND STOCKS

TINTIC SMELTER RECEIVES BLOWER

South Furnace Will Soon be Blown-in to Smelt Copper.

SIQUX HAS BIG ORE CAVE.

East Crown Point to Get Busy Sinking Shaft to 300 Level.

Eureka, Feb. 22.-The past week has een of much importance to Tintic, as there has been a great deal "doing" in the way of mining throughout the whole district. The most important development was the opening up of ore in the north workings of the iron Blossom, which has added another bonanza to the district's already long ust, and which has proven beyond a doubt that the great Colorado-Sloux ore body gets larger and richer as it extends further south. The first lot of re from the new strike was hoisted o the surface Monday, and consisted of nine mining carloads. The ore is of nine mining carloads. The ore is high-grade silver and lead, and is of such a class that will enable the company to come forward with a big dividend within the next 60 days. As near as can be ascertained at this time the ore is of a richer grade than either that of the Sloux or Colorado. The search for ore in the Iron Blossom has search for ore in the Iron Blossom has been watched with great interest by mining operators. It was regarded necessary at first to sink a shaft on a necessary at first to sink a shaft on a direct line with the Sioux and Colorado shafts, in order to get the further extension of the vein. This was done, and within 200 feet of the south line of the Sioux, but it did not catch the ore. The Knight experts then figured that the vein had taken a turn toward the east and concentrated their work in that direction, with the result that the ore was encountered. The Iron Riesson also has a large amount of the ore was encountered. The Iron Blossom also has a large amount of good ore developed in the south work-ings, and it can be said that the com-pany now has two distinct mines.

BLOWER READY SOON

The Tintle smelter is operating in good shape, the three furnaces running as smoothly as though they had been in operation for years. The new blower for the copper furnace arrived the other day, and as soon as it can be put in place the fourth furnace of the plant will be blown in. Then the smelter will commence handling ore from the Grand Central, Victoria and other properties. other properties.

Wednesday last the Sioux encountered

Wednesday last the Sioux encountered a cave, the dimensions of which are 150 feet in length by 50 feet in width, and similar to the cave in the Colorado. Like that of the Colorado the Sioux cave is filled with rich lend carbonate ore which can be shoveled out like sand. The discovery of the cave is considered an important find in connection with the Sioux mine. Since the finding of ore in the Iron Blossom It is a certainty that the Sioux vein extends unbroken through its property. The cave has been followed for a distance of 100 feet where it commences to go further without timbering, but it may widen out again and extend still further toward the Iron Blossom line, or it may reach into the ground of its or it may reach into the ground of its neighbor on the south.

UNITED STATES OFFICIALS.

A distinguished party of smelter and mining men came into Tintle Monday in a special train over the Salt Lake Route and spent Monday night and Tuesday in going through the underground working of the Centennial Eureka mine. The party were officials of the United States Mining & Smelting Co. In the party were W. G. Sharp, president; C. G. Rice, vice president; A. F. Holden, managing director; C. E. Allen, mine manager; Frederick Leon, assistant managing director; George W. Heintz, J. J. Starrow, S. W. Winslow and several others connected with the head office of the company in Utah. A distinguished party of smelter and

The shaft at the property is being The shaft at the property is being dropped down at a pretty lively speed, three shifts being now employed in the shaft work. At this time the shaft is down to a depth of 2.260 feet and the flow of water is not increasing to any great extent. It is the opinion of the officials of the commany that there will be immense deposits of one opened up below the 2,000 level. The deposits already uncovered on the 2,000 level are exceptionally strong and there is absolutely no question but what they go down to much greater depth.

BUILD A SWITCH.

It has been necessary to build a switch from the Brooklyn nine near filter City to connect with the Eureka Hill railway, on secount of the property making regular shisments of ove to the Tinte smelter. When the switch is completed the ore from the unne can be landed at the smelter without a hauf by team, which will greatly facilitate the handling of the mine's ourput.

put.

The Manhattan group, taken over by the Snyder brothers a few months and, is being developed. At the present time the work of enlarging and retimbering the shaft is under way. This accomplished, sinking will be resumed. The shaft on this ground, which lies just north of the Ballion fack and Gembi mines, is sunk to a depth of 100 feet. Parties have secured an option on

24 Acres

On 19th East St., Just south of 10th Bouth St., for

\$10,000.00

The land is a good buy either to hold or to subdivide.

George M. Cannon Company

early all of the issued stock of the mearly all of the issued stock of the fron Hat company, on a basis of ten cents per share. Aside from the stock which is owned by the incorporators of the company, there have been issued about 25,000 shares. All of these shares with the possible exception of 1,000 shares, have gone into the pool. The company's ground has at different times attracted attention on account of its location in the southeastern part of markably strong surface showings, one markably strong surface showings, one of which is an iron blow-out similar to that on the Iron King ground.

EAST CROWN POINT.

The East Crown Point will soon re-sume work, according to the manage-ment. Bad weather has retarded work at this property this winter. The East Crown Point shaft has been sunk to a depth of 140 feet, and it is the inten-tion of the company to sink to the 200-level before cross-cutting. There is quite a demand for the lower priced East Tintic stocks, and has a consequite a demand for the lower prices East Tintic stocks, and as a conse-quence this company has sold enough of its treasury stock to provide a good working fund, and it is possible that

working fund, and it is possible that the workings may be put down to the depth the hoisting plant already installed is capable of going—500 feet.

A new company will soon be formed for the development of a group of claims suth of the Bullock mine and the property of the Tintic Central. The owners of the ground are E. R. Higginson and Andrew Baxter of Silver City, who will also control the company which will be funched at an early date.

The Opohongo property is being worked through the Black Jack, the work being carried on from the 200

is learned from a reliable source that work is to be resumed at the Zuma, perhaps within the next month. This ground is considered among the best on the "east side" and is owned almost entirely by Eureka people. The property is equipped with a good hoist and all the other machinery necessary to carry on development. carry on development.

QUARTZ AT BLACK JACK.

The east drift in the Black Jack, from the 1,400-level, cut into some ore-bearing quartz the other day, and Superinten-dent Frank Birch is of the opinion that ore will be encountered at this point within a short time. Some from ore is now being received at the Tintic smelter from the Black Jack, and it will not be long before the mine is sending down ore of a higher grade. The main shaft at the Black Jack is down of feet below the 1400 long.

BRIGHT OUTLOOK FOR CHAFEY MINES

Nevada Man Writes of Prospects Of New Mining Camp.

TELLS OF VARIOUS LEASES

High Grade in Black Hole-O'Brien Claims Strike Rich Ore.

An interesting letter on conditions at Chafey is given by A. W. H. Anderson, a well known mining man of Nevada. His letter which was addressed to E. W. Clapp of Reno, reads as follows:

"When you arrive at the town of Chafey it does not give one the imthat there is very much tivity in the camp, for like most other mining towns in the state of Nevada, It grew up very rapidly, in fact, too quickly, to warrant such a large town, As there were only about 60 men carning wages at the Black Hole mine, and as these few men could not keep the place going, it naturally had its setback, which was the best thing possible for the ultimate permanency

of the camp.

"From the very commencement of the camp numbers of fine ledges have been found, but owing to the strinbeen found, but owing to the stringency of the money market, very little has been forthcoming for development, but in most cases wherever prospecting has been done good results have been obtained and the camp is gradually opening up some good ledges and there is no question, it is proved beyond all doubt, that there are plenty of large hodies of good milling ore to keep any number of stamps going for some time to come besides several high grade propositions.

WORK AT BLACK HOLE.

The Black Hole mine at present oks better than it has ever looked, il through the stopes values run very igh and in the shaft 144 feet below the black Hole tunnel the values in oth north and south drifts exceed the Black Hole tunnel the values in both north and south drifts exceed \$100 per ton. Active development is being pushed on, and the two mills are kept going continuously and Mr. Chatey is creeting another mill so as to increase the output of the camp, as there is plenty of ore on many dumps waiting to be crushed.

"All along the Black Hole line the leases are opening up well and the ore carrying rich values.
"In Barber canyon guile a number.

"In Harber canyon quite a number f claims have good ledges, some of hen in rich ore. On the San Fran-isco claim quite a number of leasers are working and nearly all of them have rich ore, some going as high as \$120 to the ton. The Chicago is being actively developed and has good ore. There is a lot of excitement all around this part of the district and hoists are

being ordered so as to get right down to business. One is already at Mill lity for the San Francisco. "The O'Brien claim struck some very rich ore a few days ago. These claims are situated a little to the northeast of the Black Hole near the old Auburn mine, which produced some rich ore in the early history of the camp.

OPENING MANY CLAIMS.

"It is surprising to see how many on are scattered about the camp men are scattered about the camp opening up different claims or leases, and if money was only a little easier. There would be great activity here, but it is only a matter of a few weeks when plenty of money will be forth-coming for Chafey and district. It is quite impossible to keep the place back for both the ledges and the values are there."

"DOLPH" WHITNEY, Stock Broker, Member S. L. Stock and Mining Ex 322 Atlas. "You say-I do." Bell, 1717.

THE ROSE OF THE BANCHO.

OPTION IS GIVEN ON GOLORADO MINE

Cole-Ryan Crowd Said to Have Secured Right to Purchase Control.

WILL TAKE IN THE SMELTER.

Knight Interests Guarded in Giving Out Information on Prospective Sale of Properties.

Although it is admitted by Jesse Knight and his associates that an option has been given on the Colorado mine and the Tintic smelter, details as to the deal have not been given out. While in Salt Lake Saturday Mr. Knight declared that an option had been given, but he declared, with considerable emphasis, that the deal for the smelter would not go through unless a sane smelting arrangement was made by the smelting arrangement was made by the parties taking it over, for the treatments of ores from his properties.

It has been understood for some time that a deal has been on with the Colengyan crowd, which to be more exact is the International Smelting company, but nothing definite was arrived at until several days ago when Mr. Knight gave his final opinion on the deal. Many rumors have been going the rounds of the stock brokers that the property was to be sold, but definite rounds of the stock brokers that the property was to be sold, but definite details were lacking. Until Mr. Knight gave his word that the deal was on there was no confirmation of the story. Ernest Woolley is believed to be the person to whom the option was given, and as he has gone to New York, this tends to strengthen the idea. He recently visited the property with Capt. Duncan MacVichie and an exhaustive report was made of the mineral resources of the Tintic mine.

GIVES PRICE ON MINE,

The Colorado property has already produced a million and a half, and authorities vary as to the amount that is still available. The range of their figures is between \$10,000,000 and \$15,000,000. With these figures to go it is safe to say that the figure at which the mine is held is large. From sources the are believed to be reliable it is understood that the price to be paid for Colorado will be \$4 a share. This will be paid for the control, and all stock holders will be allawed to dispose of their stock at the same price.

As to the price for the smelter it is rumored that it will be in the neigh-borhood of \$1.250,000. This property would afford the international an op-

It was learned today that the United It was learned today that the United States Smelting, Refining and Mining company has made its offer to the Knight interests for control of the Colorado and the smelter, but that their figure was not in the neighborhood of that offered by the Cold-Ryan crowd. The American Smelting and Refining company has also been somewhat nettled over the encroachment of the smelter into its domain and has been looking toward purchasing. Noth-

Refining company has also been somewhat nettled over the encroachment of the smelter into its domain and has been looking toward purchasing. Nothing definite was arrived at as the concern had other interests that took its attention.

It is almost certain that all that the Cole-Ryan outfit has in view is the Colorado and the smelter. As to the remainder of the Knight interests it is understood that they will stay as they are at present. There was some talk of taking over other Tintle properties but this was abandoned with the securing of the option on the mine and smelter.

The mouth of Little Cottonwood canyon is causing some excitement. The you is causing some excitement. The lower tunnel is now in 245 feet and expects within the next 30 or 40 feet to reach the ledge which will be at a depth of 150 feet. The ore uncovered gives as-say returns of 32 ounces of silver, 62 per cent lead, 8 per cent copper and \$2.20 in gold.

According to Boston authorities F. Augustus Heinze has exercised his option to purchase the Mascotte tunnel from the Bingham mines company and has made a partial payment of \$76,000, the remainder to follow in the course of several months. The option price with interest amounts to \$176,000. The Bingham Mines company will use this

STEPHENSON HEADS COMPANY. Guggenheim Chemist Resigns to Man-

age Idaho Mining Company. The Bell Boy Gold & Copper Mining ompany of Pocatello has been incor-

company of Pocatello has been incorporated.

The company was incorporated at 300,000 shares, 200,000 shares being in the treasury stock. The president of the company is William Stephenson, as brother of Jim Stephenson, who is well known in mining circles, resigned his position as chief chemist for Guggenbeine's American Smeltling & Remining company, in which capacity he received a salary of \$8,000 a year, to personally superintend the development of this property, which is yet in an almost virgin state, on account of the trouble there has been over it, but the new company is composed of some of the most experienced and prominent mining men of the state, and they predict great things for the property. They say that the ore runs very rich in copper and that pieces of free gold as large as peas have been found in many places in the mine. Work will start at once, and there are few, if any, of the shares for ale. This property promises to develop into one of the richest holdings in the state and such is the optimistic reeling of the main stockholders, that they have refused an offer many times what they paid for their holdings.

This property is located at Carriboo, Bingham county, Idaho, and the headquarters of the company are to be at Pocatello,—Pocatello Advance.

UTAHNS AT SEVEN TROUGHS,

The Seven Troughs Miner of Feb. 13 sports that Ed Sherard, superinten-

dent of the Gold Coin company, is increasing his force in the tunnel headed
for the rich veins discovered in the
Wild Buil on the south, and which are
knewn to be trending northward into
the Gold Coin property.

A vertical depth of 300 feet will be
attained at a point 600 feet from mouth
to the tunnel where it is expected these
vein will be tapped.

Before this, however, a well-defined
grey dyke vein clearly shown on the
surface from which fair values were
taken will be cut in the next 50 or 60
feet, and as the tunnel is already in
over 400 feet, very interesting developments may be looked for at any tline.

The Gold Coin people are highly
pleased over present conditions, as they
own the choicest ground and are the
largest company operating in Burnt
Canyon which is in the center of the
great mineralized district.

Arihur Parsons, head credit man at
Z. C. M. I., is president of the company, with S. H. Love, W. S. Romney
and N. Y. Schehold, all Z. C. M. I.
men, among the directors.

WILL RESUME WORK TOMORROW B. H. Bullock, manager of the Tintie Combination property will be in the Tintic district tomorrow and for a greater part of the week will make a careful study of the work both on the Tintic Combination and the Bullock properties. Shortly before leaving he declared that some excellent reports will be heard from the properties shortly.

The Combination has not been working for a number of days on account

Ing for a number of days on account of the breaking of the whim. Mr. Bullock was in Sait Lake Saturday securing supplies and repairs for the property and work will be resumed again

CONCENTRATES.

J. M. Reynoids, who has been in the east for several months promoting the interests of the Bradshaw Mining company, has returned and announces that some good work will be done this year by that property in the Beaver mining district. Mr. Reynolds declares that the east is taking more notice of Utah mining stock than ever before.

Joseph Lippman and Jack Rookildge have returned from Humboldt county. Nevada, where they have been looking over the grounds of their Indian Iko property recently acquired. Some rich strikes in that vicinity have caused considerable excitement. The operators declare that several applications have been made to lease their property.

Within the next two weeks the shaft on the Ohio Copper perperty will be connected with the tunnel, thus affording an opportunity to pump air into the workings without sending it 13,000 feet along the Mascotte tunnel as is now the case. But 135 feet more of work is required to connect the tunnel and the shaft. With but 120 feet more of work on the upraise from the tunnel, the ore body will be struck for the crosscut.

INDIAN WAR VETERANS. Visit Public Schools and Entertain

Pupils-Successful Jail Break,

Special Corresponden Nephi, Juab Co., Feb. 16.—Today a number of Indian war veterans visited the public schools in company with the trustees, and delighted the young people with their narratives of Indian troubles in the pioneer days, and the children entertained their visitors with

a number of patriotic songs.

Veteran L. A. Balley told how Black
Hawk and his brayes entered the Sun-Hawk and his braves entered the Sunday afternoon meeting, ordered all the people out, took possession and called for food. Jacob Bowers gave an exhibition of indian tactics, and told a story in the Indian language. Maj. Charles Sperry, a pioneer of 1847, and also one of the first settlers of Nephi in 1861, told how numerous and troublescme the Indians became. President (then Governor) Brigham Young Trected the people here to build a wall 12 feet high, made of mud and earth, around the fort. Chief Walker came along and ordered the people to stop disfiguring his ground; they obeyed, for a while, then resumed work again and finished the wall, with a gate on the south and one on the north.

At the Central school the veterans

the wall, with a gate on the south and one on the north.

At the Central school the voterans were invited to the diningroom, where the domestic science girls had prepared an excellent repast, and were shown the handlwork of the students in the manual training department.

Sometime during the night of Tuesday or early Wednesday morning, four desperate burglars brought in from Tintic by Sheriff Henricd, made their escape from the county jall here. Three of them were located on the upper floor and made their escape by sawing the steel bars of their cells. Coming down stairs they liberated another of their pals, by sawing the lock off his cell, and they then proceeded to the west wall and dug a hole through the soild brick wall, through which they made their escape. The theory is that they were aided by some one on the outside. They have not yet been apprehended, but the officers believe that they will be overtaken and brought back to justice.
